

Epic	Persona	User Story	Acceptance Criteria
Authentication & Profiles	Hirer	As a Hirer, I want to sign up and sign in to the platform so that I can browse and book event venues.	Given the Sign-up and Sign-in pages, When I enter valid details with a complex password (at least 1 uppercase letter, 1 lowercase letter, 1 special character, and at least 6 characters), Then my account is created in the MS SQL Server database, I can log in, see the welcome message "Welcome username", and see a logout link.
Authentication & Profiles	Hirer	As a Hirer, I want to edit my profile details, upload verification documents, and check my credibility score so that my booking applications are more likely to be accepted by vendors.	Given the Hirer Profile page, When I fill in my name, phone number, and choose an avatar, Then my profile is updated. When I upload my driver license, business registration certificate, and public liability document, then my documents are saved as base64 in the database and my credibility score updates to reflect document completion.
Venues Search & Suitability	Hirer	As a Hirer, I want to browse venues, apply suitability filters, and check recommended suitability keywords so that I can find a venue that perfectly matches my event type.	Given the Browse Venues page, When I search by suitability keywords (e.g. tennis, dinner, classical music, rock concert, birthday, wedding), Then the venue catalog displays only matching venues with their suitability badges clearly highlighted.
Booking Applications	Hirer	As a Hirer, I want to request a booking timeslot for my event at a venue so that I can secure the location for my occasion.	Given the Venue Booking form, When I select an event name, guest count, date, timeslot, and duration, Then my booking application is submitted with "pending" status and is visible on both my dashboard and the vendor's dashboard.
Venue Management	Vendor	As a Vendor, I want to perform CRUD operations on my venues so that I can control what venues I manage and list on the platform.	Given the Venue Management page, When I add, edit, or delete a venue with capacity, description, price per hour, and suitability tags, Then the updates are stored in the database and the marketplace catalog reflects these changes immediately.
Venue Management	Vendor	As a Vendor, I want to block or unblock specific timeslots for my venues so that I can prevent bookings when the venue is unavailable.	Given the Venue Management page, When I select a venue and add a blocked timeslot with a reason, Then hirers cannot submit booking applications for that venue during those dates.
Booking Decisions	Vendor	As a Vendor, I want to review booking requests, see the hirer's reputation and compliance documents, and accept or reject applications so that I can select reliable clients for my venues.	Given the Booking Applications list, When I view a pending request, Then I see the hirer's compliance score, uploaded documents, and historical star ratings. When I click "Accept" or "Reject" with comments, the application status updates.
Analytics Dashboard	Vendor	As a Vendor, I want to view interactive charts showing booking statistics and venue utilization so that I can track my business performance over time.	Given the Vendor Analytics dashboard, When I toggle time filters (this week, this month, last month, all time), Then the interactive bar chart (hirer tallies per venue), stacked bar chart (combined tallies), pie chart (active hirers), and line chart (utilization over time) update instantly.
Administration	Admin	As an Admin, I want to log in with secure credentials (admin, admin) to access the dashboard so that I can perform core management tasks via GraphQL.	Given the Admin Login page, When I log in with credentials (admin, admin), Then I am authenticated and redirected to the Admin Console.
Administration	Admin	As an Admin, I want to assign vendors to venues and toggle featured venues so that the platform inventory is properly managed and promoted.	Given the Admin Dashboard, When I select a vendor to reassign a venue or toggle its featured status, Then the changes are saved and featured venues are highlighted on the Hirer's homepage.
Business Reports	Admin	As an Admin, I want to generate reports on venue popularity and active applicants so that I can monitor overall platform performance.	Given the Admin Console reports section, When I select the Popularity tab or Applicant Activity tab, Then I see the Top 3 most popular venues (with peak booking day/timeslot) and the Top 3 most active hirers (with successful bookings vs. applications ratio).
Real-Time Notifications	Admin	As an Admin, I want to notify hirers and vendors in real-time when a venue is on sale so that they are instantly aware of the discount.	Given the Admin Console,When I trigger a 45% discount sale notification via GraphQL subscriptions,Then the venue name turns red and bold with a warning on the active dashboards of all logged-in hirers and vendors simultaneously.
